Precision Contracting is a mold clean up and mold abatement contractor whose offices are in North Branch, Minnesota. In dealing with residential or commercial mold remediation, Precision will first visually examine the building and its HVAC system, then perform surface and air samplings for analysis, and a remediation plan will be developed. In an emergency response, Precision will remove all wet materials from the site and provide the necessary air circulation to deter dampness. Where water damage has developed over a period of time, Precision will offer proper containment and removal, site decontamination, and referrals to a certified lab for mold testing.
