CPR Software develops construction cost-estimating software for the construction industry. CPR Software is based in Jacksonville, Florida. Since 1986, the company has specialized in the development of construction cost estimating software specifically designed for general construction, home building and remodeling, concrete construction, residential and commercial painting, insurance repairs, and restoration. While most of its programs and programs suites are intended to work with Excel, CPR Software also offers a stand-alone cost estimating software package. CPR Software is specialized in developing functional and user-friendly all-in-one construction cost estimating software tools for accurately calculating material, labor, equipment, and construction costs. Its cost estimating software products are designed for general construction, remodel construction, home building, home remodeling, concrete construction, residential and commercial painting, insurance repair and restoration, and more. Put software technology and simplicity to work for you in creating fast and accurate construction cost estimates.
